LAWN GRASS SEED

Several sowings are better than one. Do not risk all your seed at one time. The seed may be washed away by a downpour of rain immediately after planting. A good plan is to sow a part of your seed walking East and West—the next time walk North and South, in this way assuring an even distribution. Very good success can be had from scattering seed on a soft snow. In spring it is well to rake out all dead grass before sowing.

Use Grass Seed Generously. Where lawns are kept in neat condition, the plants do not produce seed as Nature intended. This deficiency must be supplied by an occasional seeding.

KENTUCKY BLUE GRASS

This seed should be used only on well-established lawns, as it does not "stool out" or produce a turf until the second year. On newly-graded soil, Blue Grass should have a nurse crop of Red Top and White Dutch Clover.

Prices: 1 lb., 70 cents; 5 lbs., \$3.25; 10 lbs., \$6.25.

SHADE GRASS MIXTURE

For use in courts, under trees and shady places, we have produced a mixture with shade-loving grasses which will give excellent results where other grasses fail. When the grass has become established, water generously once a week, and give an application of Sheep Manure and Bone Meal at least twice a year.

Prices: 1 lb., 75 cents; 5 lbs., \$3.60; 10 lbs., \$6.80.

Louisville Lawn Mixture

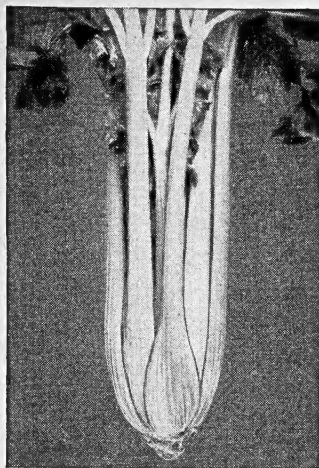

This blend of fine-leaved grasses with White Dutch Clover is recommended for use in re-seeding established lawns, patching thin spots, and for seeding newly-graded yards where a permanent stand of Kentucky Blue Grass is desired. Ready for cutting after 30 days of good weather. This seed should be broadcast evenly to avoid a patchy appearance.

Prices: 1 lb., 70 cents; 5 lbs., \$3.25; 10 lbs., \$6.25.

MISCELLANEOUS GRASSES

ROSES

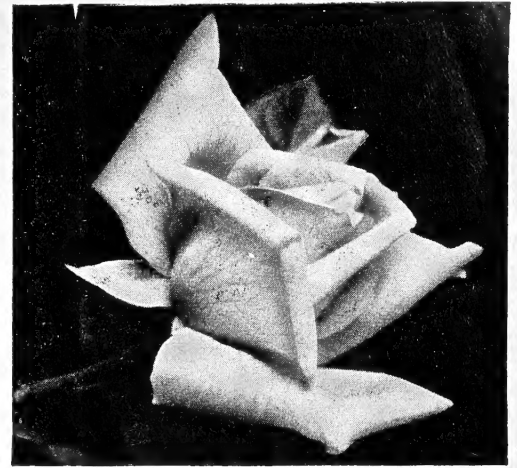

The roses we offer for the season of 1946 are of the same sturdy stock and high quality and produced by the same growers as those offered heretofore. We will not pot our roses in earth, but will deliver plants to our customers Bare Root. We urge our customers to place orders early to be sure of getting the desired varieties. Weather permitting, deliveries will be made early in March. Upon arrival, roses should be planted immediately or "heeled in" deep until they can be properly planted. Under no circumstance should plants be kept in a warm, dry place. Prices: 85c each; \$9.00 per dozen.

ROSES

- Betty Uprichard.** H. T. The long-pointed buds are salmon-pink with a touch of carmine. Fragrant.
- Caledonia.** H. T. The most desirable white. Long-pointed buds opening to a very double flower.

- Paul's Scarlet.** H. W. Medium-sized, intensely red flowers borne in loose clusters. Highly recommended.
- Talisman.** H. T. Flowers range from rich scarlet and gold to a rose and yellow. Long stems.

CARE OF ROSES

PLANTING. It should be borne in mind that roses will do much better in well-drained clay soil with plenty of sun. The plants should be set out as soon as received. The rose beds should be so planned that they will be at least three feet wide, but never more than six feet in width. Holes to receive plants should be dug at least fifteen inches deep and equally as wide, so that the roots may be spread easily. Well-seasoned cow manure and a little bone meal may be incorporated with the soil. Fill in earth and pack firmly so as to leave no air pockets. The juncture of the root stock and stems should be just beneath the surface. Newly-planted roses should be well watered. We recommend placing Hybrid Tea Rose bushes eighteen inches apart. A little crowding makes for longer and straighter stems.

PRUNING. For best results the Hybrid Teas should be cut back to about six or eight inches, leaving an outside bud at the top of the cane. Climbing roses bloom on canes of the previous season's growth, hence the old wood should be cut out each year.

FERTILIZING. A handful of bone meal and a four-inch pot full of sheep manure should be worked into the surface soil. This will insure luxuriant growth, good stems and flowers of splendid substance.

WINTER PROTECTION. In late fall or early winter, earth should be heaped over the crowns to a depth of at least ten inches. If available, cow manure should be placed around the mounds. This hilling up process will protect the bushes against the drying action of winter winds, frost, and sun.

About the last week in March the winter covering should be removed, fertilizer applied and the bed raked off smooth.

SUMMER CARE. A top dressing of peat moss not only gives the rose bed a neat appearance, but causes better growth by conserving moisture and keeping down weeds. Grass clippings may be used instead of peat moss. If no mulch is used, keep the top soil pulverized with a sharp rake. After every rain, the crust should be broken up as soon as the ground is mellow enough to work.

Insects and disease will inevitably do much damage unless preventative measures are taken. Dust thoroughly once a week with Massey dust or spray with a combination of Bordeaux Mixture and Arsenate of Lead. When plant lice appear, spray thoroughly with Black Leaf 40.

PERENNIAL PLANTS

Prices: Perennials are 35c each; \$3.60 a dozen unless otherwise noted.

The hardy plants, whose roots and crowns live through the winter and bloom year after year, are so varied in habit of growth and color of flower that varieties can be found to fill most any requirement. Whether you plan a tall screen or ground cover, succession of color in the garden or a profusion of cut-flowers you will find among the perennials plenty of material from which to make your selection.

Most perennials will thrive in average garden soil. Some require a bit of shade or a soil laden with humus. For best results, the gardener should learn the needs of his plants and place them where they will be happy, supply such culture as will ensure healthy growth and a wealth of bloom.

For those who wish to know more about the hardy plants, we recommend "The Book of Perennials" by Hottes.
